Senior Software Engineer

The secret is out: every day, more and more Fortune 500 companies are arming their Sales and Marketing teams with FirstRain Insights on their Customers and Markets—join us now and be part of the big data revolution!

FirstRain, Inc. is a fast-paced, Silicon Valley B2B big data analytics software company that helps companies drive growth by truly understanding the business of their top customers—their priorities, their urgent pain and their own customers. Our customers absolutely love us, and we're growing incredibly fast by developing and selling the most valued and advanced enterprise solution of its kind in the market today. We're privately held with strong financial backing, headquartered in San Mateo, CA with additional offices in New York City and Gurgaon, India. The secret sauce behind our strategy is to hire amazing people and then to have fun and work hard building and selling amazing B2B big data analytics solutions..

FirstRain is looking for a Senior Software Engineer to be a part of core Frontend development group, within our global engineering development team. This person will work with the Frontend development team to deliver optimized UI solutions for our functional and strategic initiatives. The person should be proficient in web-app technologies like Angular, ReactJS, JQuery, Spring MVC etc. He should be completely familiar with development best practices. He will play a key role in building innovative and robust solutions that drive automation across product stack. Good problem solving and analytical acumen is a must. This position is located in Gurgaon, India.

Job Purpose: The role is responsible for independently, designing and implementing web application from layout to functional UI according to requirement specifications. Strive to create technically firm framework and functionally appealing application that features user-friendly design and clear navigation.

This role requires that you have:

- 5 – 7 years of experience on web application development.
- Expertise in any of the JavaScript framework, preferable AngularJS, ReactJS
- Hands on experience on Web-framework like Spring
- Hands on experience on Java
